## SPECIFIC RISKS

- Counterparty risk: This is the risk of default by a counterparty, for instance, in connection with forward financial instruments traded over the counter, leading to default payment. Thus the default payment by a counterparty may cause the net asset value of the compartment to fall.
- Liquidity risk: This risk corresponds to the potential difficulty of selling assets due to the lack of sufficient market depth. This risk may occur in the event of a sharp increase in risk aversion, or in the event of market disruption.
- Credit risk: The compartment may be subject to the risk of a downgrade in the rating of a debt or of an issuer defaulting. This risk may affect individual bonds, or the portfolio as a whole in the event of a widespread deterioration of credit spreads. The materialisation of this risk could lead to a fall in the net asset value of the compartment.

## Compartment Invested in European Convertible Bonds

### ABOUT THE FUND

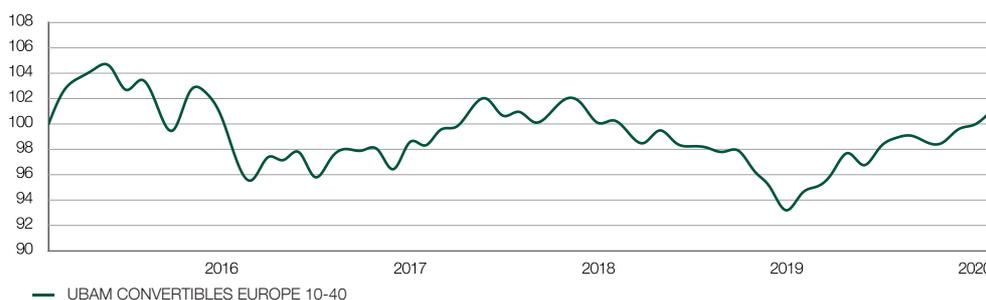

UBAM Convertibles Euro 10-40 whose classification is 'diversified', seeks to allow investors to benefit from the specific risk/return ratio of convertible bonds in the euro zone. Convertible bonds have an asymmetric risk/reward profile: all other things being equal, for a given variation of underlying shares, an increase in investment in these underlying equities is more significant than a decrease in investment, while conversely, a convertible bond also provides a lower return than a conventional bond issued by the same issuer.

In order to manage the overall exposure to equities and to interest rate risk, as well as credit risk and currency risk, the compartment may use derivative instruments (futures, options, swaps, CDS) on listed European markets for hedging and/or exposure, without seeking overexposure.

For information purposes only, the sub-fund's performance may be compared to that of the Thomson Reuters Convertibles Indices Europe Hedged (EUR) index (Ticker: UCBIEX20 Index), with coupons and/or dividends reinvested. The sub-fund consists of a broadly diversified portfolio that is actively managed, consisting primarily of euro-denominated securities. The value of the sub-fund is calculated and denominated in euros.

Currency risk will be hedged systematically, and this hedging may include indirect currency risks (in the event of assets denominated in one currency whose underlying risk is in another currency). The aim of hedging is to achieve a residual direct exposure of less than 10%. For all share classes denominated in a currency other than the euro, the currency risks of the share class' currency against the sub-fund's reference currency will be systematically hedged.

### PERFORMANCE EVOLUTION EUR (NET OF FEES)

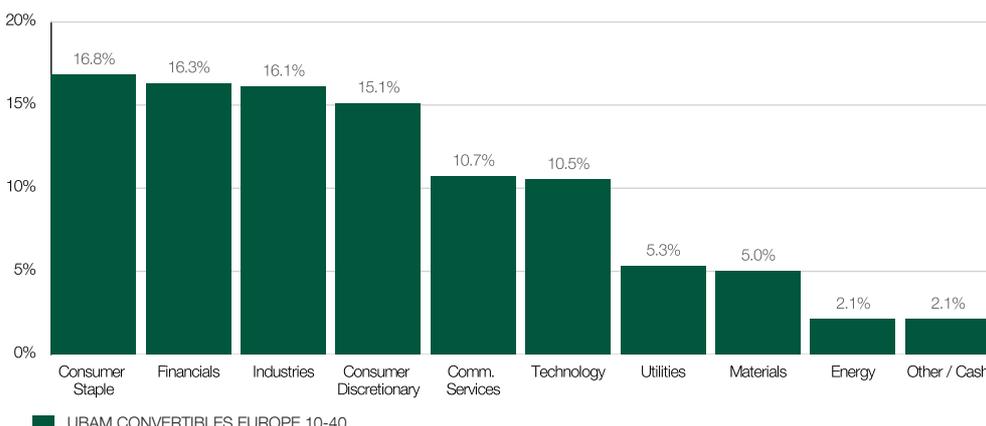

Performance over 5 years or since inception. Source of data: UBP. Exchange rate fluctuations can have a positive or a negative impact on performance. Past performance is not a reliable indicator of future results. The value of investments can fall as well as rise.

### PERFORMANCE HISTORY EUR (NET OF FEES)

	YTD	2019	2018	2017	2016	2015
UBAM CONVERTIBLES EUROPE 10-40	1.01 %	7.23 %	-6.87 %	1.57 %	-2.12 %	3.20 %

UBAM CONVERTIBLES EUROPE 10-40	1.01 %	2.44 %	6.78 %	2.70 %	0.96 %	2.48 %

Since launch. Source of data: UBP. Exchange rate fluctuations can have a positive or a negative impact on performance. Past performance is not a reliable indicator of future results. The value of investments can fall as well as rise. Past performance figures are stated in the currency of the share class and calculated with dividends reinvested; they are free of ongoing charges. The calculation does not take into account sales commissions and other fees, taxes and applicable costs to be paid by the investor. For example, with an investment of EUR 100, the actual investment would amount to EUR 99 in the case of an entrance fee of 1%. At investor level, additional costs may also be incurred (e. g. front-end load or custody fee charged by the financial intermediary).

**GLOSSARY**
**Benchmark**

Index used as basis for measuring the performance of an investment fund. Also called reference index or comparison index.

**Derivatives**

Derivatives are financial instruments whose prices depend on the price movements in a reference variable, known as the underlying. Underlying assets may be shares, equity indices, government bonds, currencies, interest rates, commodities like wheat and gold, or also swaps. Derivative financial instruments may be unconditional forward transactions or they may be options. They are traded either on futures and options exchanges on standardised terms, or over-the-counter (OTC) on freely negotiated terms. Changes in the price of the underlying lead in certain situations to considerably higher price fluctuations in the derivative. Derivatives can be used to hedge against financial risks, to speculate on price changes (trading) or to take advantage of price differences between markets (arbitrage).

**Duration**

Duration is the average time to payout. This key figure is used to measure the influence of interest rate movements on the price of a bond or bond fund. Duration is defined in years (e.g. 3-year duration means that the value of a bond would increase by 3% if interest rates fall by 1% and vice versa).

**High-yield bond**

Bonds with high interest rates and high risk exposure. The issuers of such securities are often companies with a low credit rating.
