Risk and reward profile

This indicator represents the annual historical volatility of the Fund over a 5-year period.

Risk Category 4 reflects average/moderate potential gain and/or loss in the value of the portfolio.

Historical data such as that used to calculate the synthetic indicator cannot be considered as a reliable indication of the Fund's future risk profile.

The risk category associated with the Fund is not guaranteed and may change over time.

The lowest risk category does not mean "risk free".

Your initial investment is not guaranteed.

Significant risk(s) for the Fund not taken into account in this indicator include the following:

Counterparty risk: The use of over-the-counter derivatives exposes the Fund to a risk that the counterparty to the transactions will fully or partially fail to honor its contractual obligations. This may result in a financial loss for the Fund.

Credit risk: The Fund invests in bonds, cash or other money market instruments. There is a risk that the issuer may default. The likelihood of this happening will depend on the credit-worthiness of the issuer. The risk of default is usually greatest with bonds that are rated as sub-investment grade.

Currency risk: The Fund invests in overseas markets. It can be affected by changes in exchange rates which may cause the value of your investment to decrease or increase.

Liquidity risk: Liquidity risk exists when particular investments are difficult to purchase or sell. This can reduce the Fund's returns because the Fund may be unable to trade at advantageous times or prices.

Full details of risks are disclosed in the chapter 'Risk Factors' in the prospectus.
