Equity sensitivity	27.90 %
Fund's AUM	EUR 34.06 mio
Track record since	28 October 2010
Minimum investment	0.001 Share
Subscription	Daily
Redemption	Daily
Price publication	Telekurs, www.ubp.com
Management fee	0.70 %
Number of holdings	38
ISIN	FR0010928259
Telekurs	11654996

For any information concerning additional fees that may apply, please refer to the prospectus.

SPECIFIC RISKS

- Counterparty risk: This is the risk of default by a counterparty, for instance, in connection with forward financial instruments traded over the counter, leading it to default payment. Thus the default payment by a counterparty may cause the net asset value of the compartment to fall.
- Liquidity risk: This risk corresponds to the potential difficulty of selling assets due to the lack of sufficient market depth. This risk may occur in the event of a sharp increase in risk aversion, or in the event of market disruption.
- Credit risk: The SICAV compartment may be subject to the risk of a downgrade in the rating of a debt or of an issuer defaulting. This risk may affect individual bonds, or the portfolio as a whole in the event of a widespread deterioration of credit spreads. The materialisation of this risk could lead to a fall in the net asset value of the compartment.

Fund invested in European Convertible Bonds

ABOUT THE FUND

The sub-fund is a feeder of the Master Fund: Z (EUR) units of the CONVERTIBLES EUROPE RESPONSABLE Fund.

The Master Fund seeks to allow investors to benefit from the specific risk/reward ratio of European convertible bonds that meet socially or environmentally responsible criteria. The convertible bonds have an asymmetric risk/reward profile: all other things being equal, for a given variation of underlying shares, an increase in investment in these underlying equities is more significant than a decrease in investment, while conversely, a convertible bond also provides a lower return than a conventional bond issued by the same issuer. However, a decrease in the price of the underlying share will decrease the value of the convertible bond to a lesser extent. The Fund will therefore seek to, all things being equal, generate more profit from the upturns in the European equities markets than losses from the downturns. This specific risk/reward ratio may vary according to changes in interest rates, credit spreads and implied volatility. Besides this asymmetry in the behaviour of convertible bonds, the objective is also to benefit from a portfolio with an average SRI rating greater than its benchmark, as evaluated by LA BANQUE POSTALE ASSET MANAGEMENT.

The performance of the Feeder Fund will be less than that of the Master Fund, primarily due to its hedging against currency risk and its own management fees.

For information purposes only, the Master Fund's performance may be compared to that of the Thomson Reuters Convertibles Indices Europe Hedged (EUR) index (Ticker: UCBI20 Index), with coupons and/or dividends reinvested.

A minimum of 85% of the assets of the Feeder Sub-fund is permanently invested in shares of the Master Fund.

PERFORMANCE EVOLUTION CHF (NET OF FEES)

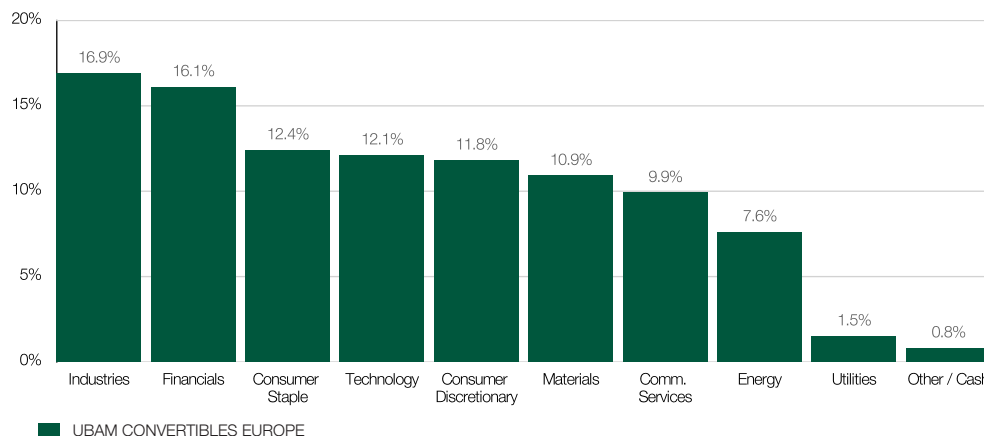

Performance over 5 years or since inception. Source of data: UBP. Exchange rate fluctuations can have a positive or a negative impact on performance. Past performance is not a reliable indicator of future results. The value of investments can fall as well as rise.

PERFORMANCE HISTORY CHF (NET OF FEES)

	YTD	2019	2018	2017	2016	2015
UBAM CONVERTIBLES EUROPE	0.19 %	4.65 %	-9.97 %	-1.41 %	-4.09 %	2.37 %
	January 2020	3 months	1 year	3 years	5 years	Since inception
UBAM CONVERTIBLES EUROPE	0.19 %	1.87 %	3.20 %	-5.78 %	-11.36 %	11.83 %

Since launch. Source of data: UBP. Exchange rate fluctuations can have a positive or a negative impact on performance. Past performance is not a reliable indicator of future results. The value of investments can fall as well as rise. Past performance figures are stated in the currency of the share class and calculated with dividends reinvested; they are free of ongoing charges. The calculation does not take into account sales commissions and other fees, taxes and applicable costs to be paid by the investor. For example, with an investment of EUR 100, the actual investment would amount to EUR 99 in the case of an entrance fee of 1%. At investor level, additional costs may also be incurred (e. g. front-end load or custody fee charged by the financial intermediary).

GLOSSARY

Benchmark

Index used as basis for measuring the performance of an investment fund. Also called reference index or comparison index.

Derivatives

Derivatives are financial instruments whose prices depend on the price movements in a reference variable, known as the underlying. Underlying assets may be shares, equity indices, government bonds, currencies, interest rates, commodities like wheat and gold, or also swaps. Derivative financial instruments may be unconditional forward transactions or they may be options. They are traded either on futures and options exchanges on standardised terms, or over-the-counter (OTC) on freely negotiated terms. Changes in the price of the underlying lead in certain situations to considerably higher price fluctuations in the derivative. Derivatives can be used to hedge against financial risks, to speculate on price changes (trading) or to take advantage of price differences between markets (arbitrage).

Duration

Duration is the average time to payout. This key figure is used to measure the influence of interest rate movements on the price of a bond or bond fund. Duration is defined in years (e.g. 3-year duration means that the value of a bond would increase by 3% if interest rates fall by 1% and vice versa).

High-yield bond

Bonds with high interest rates and high risk exposure. The issuers of such securities are often companies with a low credit rating.

High-yield fund

A fund for high-yield bonds (i.e. bonds with low credit ratings).

Investment grade

A rating provides information about the creditworthiness of a debtor. The higher the rating, the less likely the debtor is to default. A distinction is made between high-quality (investment grade) and speculative bonds (high-yield or junk bonds). For investment-grade bonds, Standard & Poor's issues ratings from AAA to BBB, while Moody's ratings range from Aaa to Baa.

Credit default swap (CDS)

A credit default swap (CDS) is a kind of insurance against the risk of credit default. Upon conclusion of a credit default swap agreement, the protection seller pledges himself to pay compensation to the protection buyer if a specified credit event occurs (eg default or late payment). In return, the protection seller receives a premium. The amount of the CDS premium depends primarily on the creditworthiness of the reference debtor, the definition of the credit event and the maturity of the contract.

THIS IS A MARKETING DOCUMENT. It reflects the opinion of Union Bancaire Gestion Institutionnelle (France) SAS, or any entity of the UBP Group (hereinafter "UBP") as of the date of issue.
