#### ABOUT THE FUND

The Fund seeks to grow your capital and generate income by investing primarily in a wide range of fixed income instruments (both Investment grade and High yield). The Fund has a maturity date of 11 December 2028 unless the terms are changed before said date. Due to the maturity date, the portfolio turnover will be relatively low.

The Fund is allowed to invest solely in instruments denominated in its base currency (USD) and is not managed with reference to a benchmark.

The fund targets 100% exposure to Developed Markets Investment Grade Bonds and 25% exposure to High Yield via CDS Index.

The recommended holding period is 5 years.

#### PERFORMANCE EVOLUTION USD (NET OF FEES)

U ACCESS - USD CREDIT 2028

Since launch. Source of data: UBP. Exchange rate fluctuations can have a positive or a negative impact on performance. Past performance is not a reliable indicator of future results. The value of investments can fall as well as rise. Past performance figures are stated in the currency of the share class and calculated with dividends reinvested; they are free of ongoing charges. The calculation does not take into account sales commissions and other fees, taxes and applicable costs to be paid by the investor. For example, with an investment of EUR 100, the actual investment would amount to EUR 99 in the case of an entrance fee of 1%. At investor level, additional costs may also be incurred (e.g. front-end load or custody fee charged by the financial intermediary).

#### SPECIFIC RISKS

Counterparty risk, credit risk, emerging markets risk, liquidity risk

Further information on the fund's potential risks can be found in the prospectus or in the Key Investor Information Documents or Key Information Documents available on [www.ubp.com](http://www.ubp.com). Any capital invested may be at risk and investors may not get back some or all of their original capital.

GLOSSARY

Benchmark

Index used as basis for measuring the performance of an investment fund. Also called reference index or comparison index.

Derivatives

Derivatives are financial instruments whose prices depend on the price movements in a reference variable, known as the underlying. Underlying assets may be shares, equity indices, government bonds, currencies, interest rates, commodities like wheat and gold, or also swaps. Derivative financial instruments may be unconditional forward transactions or they may be options. They are traded either on futures and options exchanges on standardised terms, or over-the-counter (OTC) on freely negotiated terms. Changes in the price of the underlying lead in certain situations to considerably higher price fluctuations in the derivative. Derivatives can be used to hedge against financial risks, to speculate on price changes (trading) or to take advantage of price differences between markets (arbitrage).

Duration

Duration is the average time to payout. This key figure is used to measure the influence of interest rate movements on the price of a bond or bond fund. Duration is defined in years (e. g. 3-year duration means that the value of a bond would increase by 3% if interest rates fall by 1% and vice versa).

High-yield bond

Bonds with high interest rates and high risk exposure. The issuers of such securities are often companies with a low credit rating.

High-yield fund

A fund for high-yield bonds (i.e. bonds with low credit ratings).

Investment grade

A rating provides information about the creditworthiness of a debtor. The higher the rating, the less likely the debtor is to default. A distinction is made between high-quality (investment grade) and speculative bonds (high-yield or junk bonds). For investment-grade bonds, Standard & Poor's issues ratings from AAA to BBB, while Moody's ratings range from Aaa to Baa.

Credit default swap (CDS)

A credit default swap (CDS) is a kind of insurance against the risk of credit default. Upon conclusion of a credit default swap agreement, the protection seller pledges himself to pay compensation to the protection buyer if a specified credit event occurs (eg default or late payment). In return, the protection seller receives a premium. The amount of the CDS premium depends primarily on the creditworthiness of the reference debtor, the definition of the credit event and the maturity of the contract.
