UBAM - Europe Market Neutral, a sub-fund of UBAM

Class: IHD GBP (Distribution) LU2019298814

UBAM is a SICAV managed by UBP Asset Management (Europe) S.A.

Objectives and investment policy

The Fund seeks to grow capital and generate income by investing:
- primarily in equities issued by companies having their registered office in the European Union, the United Kingdom, Switzerland and/or in the European Economic Area.
- in a discretionary proprietary overlay strategy including options and futures on European equities indices or related volatility equities indices. The use of this strategy aims to cover the market risk of the European equity market exposure and intended to provide a better risk adjusted return with lower volatility and reduced drawdown.

This actively managed Fund has two sub-strategies: one is picking stocks on the European stock market and the second one is hedging the equity exposure linked to the first strategy. The second strategy is calibrated to neutralize completely (if no active bet is implemented) the equity exposure of the first strategy, which translates into an equity market neutral exposure at the Fund level.

The Fund is not managed in reference to a benchmark.

The Fund's value is calculated and expressed in Euros.

The currency risk in relation to the base currency EUR is mainly hedged. Investors in the Fund can subscribe and redeem units on any business day in Luxembourg except days where the decisive market is closed: Eurex.

Details of the closing days are available here:

<https://www.ubp.com/en/our-offices/ubp-asset-management-europe-sa>.

The recommended holding period is minimum five years.

As an equity fund, its holdings can move in line with or return less than the broad stock market, so investors should be aware that the value of their holdings could fall and that they may not get back their initial investment.

Any income received by the Fund is distributed (distribution share class).

Risk and reward profile

This indicator represents the annual historical volatility of the Fund over a 5-year period.

Risk Category 3 reflects limited potential gain and/or loss in the value of the portfolio.

This is due to investments in equities on the European market.

Historical data such as that used to calculate the synthetic indicator cannot be considered as a reliable indication of the Fund's future risk profile.

The risk category associated with the Fund is not guaranteed and may change over time.

The lowest risk category does not mean "risk free".

Your initial investment is not guaranteed.

Significant risk(s) for the Fund not taken into account in this indicator include the following:

Counterparty risk: As the Fund uses over-the-counter derivatives, there is a risk that the counterparty to the transactions will wholly or partially fail to honour its contractual obligations. This may result in a financial loss to the Fund.

Currency risk: The Fund invests in overseas markets. It can be affected by changes in exchange rates which may cause the value of your investment to decrease or increase.

Liquidity risk: Liquidity risk exists when particular investments are difficult to purchase or sell. This can reduce the Fund's returns because the Fund may be unable to transact at advantageous times or prices.

Full details of risks are disclosed in the chapter "Risk Factors" in the prospectus.
