- The risk category represents the annual historical volatility over a period of 5 years.
- Simulated and historical data, such as the data used to calculate the synthetic risk indicator, may not be a reliable indicator of the future risk profile of the class.
- The risk category shown is not a target or a guarantee and may change over time.
- The lowest risk category does not mean a risk-free investment.

- The sub-fund invests in equity securities of Swiss companies, which explains the allocation of this risk category.
- The sub-fund offers no guarantee or protection of capital.

The class is also exposed to the following risks that are not taken into account by the synthetic risk indicator:

- Liquidity risk: A market's possible inability to absorb given trading volumes, thus affecting the purchase and sales of positions held by the sub-fund.
- Counterparty risk: When a third party (borrower or structure) is not able to meet its obligations to the sub-fund, which may adversely affect the value.
- Operational risk: Arises when inadequate or defective internal processes negatively impact the value of the sub-fund.
