ABOUT THE FUND

The Fund investment objective is to achieve medium to long-term capital growth from attractive risk-adjusted returns that exhibit low correlation with traditional asset classes. The Fund will aim to provide a return to investors by entering into an unfunded total return swap (the "Portfolio Total Return Swap"). To compensate some of the Portfolio Total Return Swap funding costs the Fund may either i) invest in short-term government debt instruments or ii) enter into a total return swap (the "Funding Swap") of which the economic interest will be transferred to an approved counterparty. The approved counterparty in respect of the Portfolio Total Return Swap and the Funding Swap will be Morgan Stanley or any other affiliate or subsidiary entities of Morgan Stanley approved by the Company as an eligible counterparty. A total return swap is a bilateral financial transaction where the counterparties swap the total return of a single asset or basket of assets in exchange for periodic cash flows.

The Fund is actively managed and not with a reference to a benchmark. The Fund will be exposed to the economic performance of a basket of financial derivative instruments ("FDI") as determined by the Portfolio Manager. The Portfolio Manager will use quantitative techniques such as systematic macro, short term and momentum strategies in selecting positions. The Fund will gain, through the Portfolio Total Return Swap, exposure to the economic performance of forward foreign exchange contracts (deliverable and non-deliverable), bond futures contracts, interest rate futures contracts, equities index futures contracts, currency options, bond swaps, interest rate swaps, equity swaps, currency swaps and credit default swaps in exchange for a floating rate return corresponding to the funding cost which will be paid by the Fund.

The Fund, through the Funding Swap may transfer the economic interest of a basket of securities in which the Fund is invested in exchange for a floating rate of return. This may include equities and equity-related securities such as common stocks, preferred stocks, depository receipts issued by companies worldwide, collective investment schemes and exchange-traded funds. The Funds exposure to CIS (including exchange-traded funds) will not exceed 10% of its NAV. The Fund does not employ geographical, industry or sector focus in relation to the asset classes to which the Fund is exposed. The Funds exposure to emerging markets may exceed 20% of the Net Asset Value (NAV) of the Fund.

Since launch. Source of data: UBP. Exchange rate fluctuations can have a positive or a negative impact on performance. Past performance is not a reliable indicator of future results. The value of investments can fall as well as rise. Past performance figures are stated in the currency of the share class and calculated with dividends reinvested; they are free of ongoing charges. The calculation does not take into account sales commissions and other fees, taxes and applicable costs to be paid by the investor. For example, with an investment of EUR 100, the actual investment would amount to EUR 99 in the case of an entrance fee of 1%. At investor level, additional costs may also be incurred (e. g. front-end load or custody fee charged by the financial intermediary).

GLOSSARY

Benchmark

Index used as basis for measuring the performance of an investment fund. Also called reference index or comparison index.

Derivatives

Derivatives are financial instruments whose prices depend on the price movements in a reference variable, known as the underlying. Underlying assets may be shares, equity indices, government bonds, currencies, interest rates, commodities like wheat and gold, or also swaps. Derivative financial instruments may be unconditional forward transactions or they may be options. They are traded either on futures and options exchanges on standardised terms, or over-the-counter (OTC) on freely negotiated terms. Changes in the price of the underlying lead in certain situations to considerably higher price fluctuations in the derivative. Derivatives can be used to hedge against financial risks, to speculate on price changes (trading) or to take advantage of price differences between markets (arbitrage).

Duration

Duration is the average time to payout. This key figure is used to measure the influence of interest rate movements on the price of a bond or bond fund. Duration is defined in years (e. g. 3-year duration means that the value of a bond would increase by 3% if interest rates fall by 1% and vice versa).
