## What is this product?

### TYPE OF PRODUCT

### OBJECTIVES

The Fund will gain exposure to fixed income by investing directly in debt and debt-related securities (which will be either fixed or floating rate, issued by governments, governmental authorities or corporations either rated or unrated with a minimum credit rating at the time of purchase of CCC as rated by S&P (or equivalent by another rating agency) and by using interest rate futures, bond forwards, swaps, options and Exchange Traded Funds (ETFs). In addition, the Fund may invest in Contingent Convertible bonds (CoCos). ## What are the risks and what could I get in return?

### Risk indicator

The risk indicator assumes you keep the product for 3 years.

The risk can be significantly different if you cash in at an early stage and you may get back less.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because the Fund is not able to pay you.

We have classified this product as 3 out of 7, which is a medium-low risk class.

This rates the potential losses from future performance at a medium-low level. Poor market conditions are unlikely to impact the Fund's capacity to pay you.

**Be aware of currency risk. You will receive payments in a different currency, so the final return you will get depend on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.**

Please refer to the prospectus for more information on the specific and material risks relevant to the Fund not included in the summary risk indicators.

This Fund does not include any protection from future market performance, so you could lose some or all of your investment. If the Fund is not able to pay you what is owed, you could lose your entire investment.
