SPECIFIC RISKS

- Emerging market risk: The Fund invests in developing overseas markets which carry a higher risk than investing in larger established markets. Investments in emerging markets are likely to experience greater rises and falls in value and may suffer trading problems. A Fund which invests in emerging markets rather than more developed countries may encounter difficulties when buying and selling investments. Emerging markets are also more likely to experience political uncertainty and investments held in these countries may not have the same protection as those held in more developed countries.
- Liquidity risk: Liquidity risk exists when particular investments are difficult to purchase or sell. This can reduce the Fund's returns because the Fund may be unable to transact at advantageous times or prices.
- Full details of risks are disclosed in the chapter 'Risk Factors' in the prospectus.

COMPARTMENT INVESTED IN GLOBAL CONVERTIBLE BONDS

ABOUT THE FUND

The Fund seeks to grow your capital and generate income primarily by investing as a master / feeder structure at least 85% in the sub-fund UBAM Convertibles Global part of the French Sicav UBAM Convertibles. The Master, UBAM Convertibles Global, is an investment fund offering exposure to the Convertible Bond asset class.

It is an actively managed, well diversified portfolio mainly made up of convertible bonds or equivalent bonds from any geographic region, rated or unrated, with a maximum of 50% in convertible bonds from emerging countries. Thus the Master may be exposed to high yield bonds.

In addition, the Master may invest up to 20 % in non convertibles or similar bonds. The Master currency risk will be hedged systematically with the aim of achieving a residual direct exposure of less than 10%.

The Fund may invest up to: - 15% of its net assets in liquid assets or derivative financial instruments (for hedging purpose).

Convertible bonds are debt instruments that can be converted into equities under certain conditions. This means that they have characteristics comparable to those of equities while maintaining the characteristics of conventional bonds. High yield bonds are issued by companies whose business is more sensitive to the economic cycle and pay higher interest. The return on such securities, in the same way as their level of risk, is therefore higher than traditional bond products.

Since launch. Source of data: UBP. Exchange rate fluctuations can have a positive or a negative impact on performance. Past performance is not a reliable indicator of future results. The value of investments can fall as well as rise. Past performance figures are stated in the currency of the share class and calculated with dividends reinvested; they are free of ongoing charges. The calculation does not take into account sales commissions and other fees, taxes and applicable costs to be paid by the investor. For example, with an investment of EUR 100, the actual investment would amount to EUR 99 in the case of an entrance fee of 1%. At investor level, additional costs may also be incurred (e. g. front-end load or custody fee charged by the financial intermediary).

GLOSSARY

Benchmark

Index used as basis for measuring the performance of an investment fund. Also called reference index or comparison index.

Derivatives

Derivatives are financial instruments whose prices depend on the price movements in a reference variable, known as the underlying. Underlying assets may be shares, equity indices, government bonds, currencies, interest rates, commodities like wheat and gold, or also swaps. Derivative financial instruments may be unconditional forward transactions or they may be options. They are traded either on futures and options exchanges on standardised terms, or over-the-counter (OTC) on freely negotiated terms. Changes in the price of the underlying lead in certain situations to considerably higher price fluctuations in the derivative. Derivatives can be used to hedge against financial risks, to speculate on price changes (trading) or to take advantage of price differences between markets (arbitrage).

Duration

Duration is the average time to payout. This key figure is used to measure the influence of interest rate movements on the price of a bond or bond fund. Duration is defined in years (e. g. 3-year duration means that the value of a bond would increase by 3% if interest rates fall by 1% and vice versa).
