* (tons CO2e/\$M Sales) - corporate issuers

** (tons CO2e/\$M GDP Nominal) - sovereign issuers

ABOUT THE FUND

The Fund seeks to grow your capital and generate income primarily by investing in bonds.

It is an actively managed, well diversified portfolio mainly made up of securities denominated in US Dollars.

The Fund may invest up to 20% of its net assets in High yield and 10% of its net assets in Emerging markets.

High yield bonds are issued by companies whose business is more sensitive to the economic cycle and pay higher interest. The return on such securities, in the same way as their level of risk, is therefore higher than traditional bond products.

To achieve its aims the Fund invests in a variety of bonds issued by worldwide companies. Most of its assets are invested in FRN (Floating Rate Notes). FRN are bonds with variable interest rates and their prices are mostly not affected by variations due to change in market interest rates. The portfolio's average maturity will not exceed three years.

GLOSSARY
Benchmark

Index used as basis for measuring the performance of an investment fund. Also called reference index or comparison index.

Derivatives

Derivatives are financial instruments whose prices depend on the price movements in a reference variable, known as the underlying. Underlying assets may be shares, equity indices, government bonds, currencies, interest rates, commodities like wheat and gold, or also swaps. Derivative financial instruments may be unconditional forward transactions or they may be options. They are traded either on futures and options exchanges on standardised terms, or over-the-counter (OTC) on freely negotiated terms. Changes in the price of the underlying lead in certain situations to considerably higher price fluctuations in the derivative. Derivatives can be used to hedge against financial risks, to speculate on price changes (trading) or to take advantage of price differences between markets (arbitrage).

Duration

Duration is the average time to payout. This key figure is used to measure the influence of interest rate movements on the price of a bond or bond fund. Duration is defined in years (e. g. 3-year duration means that the value of a bond would increase by 3% if interest rates fall by 1% and vice versa).

THIS IS A MARKETING DOCUMENT. It reflects the opinion of Union Bancaire Privée, UBP SA or any entity of the UBP Group (hereinafter "UBP") as of the date of issue. It is not intended for distribution, publication, or use in any jurisdiction where such distribution, publication, or use would be unlawful, nor is it directed at any person or entity at which it would be unlawful to direct such a document.
